

# Print from Chrome with Google Cloud Print

You can make your printers available to you and anyone you choose using Google Cloud Print.

If your wireless printer says that it's Cloud ready, follow your printer manufacturer's provided instructions or see setup information for Cloud-ready printers. Otherwise, follow the steps below.

**Note:** Google Cloud Print isn't available for Chrome version 50 and above on your iPhone and iPad.

## Connect your wireless printer

1. Turn your printer on.
2. On your Windows or Mac computer, open Google Chrome .
3. At the top right, click More  > **Settings**.
4. At the bottom, click **Show advanced settings**.
5. Under "Google Cloud Print," click **Manage**.
6. If prompted, sign in with your Google Account.
7. Select the printers you want to connect, and then click **Add printer(s)**.

The printer is now associated with your Google Account and connected to Google Cloud Print. If you have a Chromebook, you can print to this printer whenever you're signed in with the same Google Account on your Chromebook.

## Print from Chrome and Chromebook

1. Open the page, image, or file you want to print in Chrome.
2. Click **File** > **Print**. Or use the following keyboard shortcuts:
  - Windows & Linux: **Ctrl + p**
  - Mac: **⌘ + p**
3. In the window that appears, click **Change** to choose your Google Cloud Printer.
4. When ready, click **Print**.

If you're using your Chromebook at work or school, your network administrator might connect one or more printers for you. The printer will be available when you're signed in to your work or school account. [Learn about using a managed Chromebook.](#)
